SKILLS

Next.js | Tailwinnd CSS | Django | PostgreSQL | Cairo | Docker | Git | Vue | Microcontroller Programming | Circuit Design & Simulation | Network Engineering

PERSONAL PROJECTS

SmartPack

An IoT-powered smart school backpack designed to prevent posture-related developmental issues in children through intelligent load monitoring, activity tracking, and real-time parental alerts.

Aug, 2026 - Oct, 2026

Tasks / Achievements

- Developed an Admin Dashboard for managing SmartPacks, users, and device assignments.
- Built a Customer Dashboard enabling parents to monitor SmartPacks, track sensor data, and manage devices.
- Developed an Android application with Bluetooth Classic support for ESP32 device connectivity.
- Implemented a multi-channel notification system supporting SMS, WhatsApp, and push notifications.
- Integrated ESP32 hardware with the backend for real-time sensor data transmission, load monitoring, step tracking, and emergency alerts.
- **Contact**: Dr. Eng. Kabini Karanja - kkabini@eng.jkuat.ac.ke

Solaris Conexus

Oct, 2024 - Mar, 2025

Key Features

- Built a decentralized full-stack energy trading platform enabling solar producers and consumers to exchange PowerTokens (SCT) via smart contracts on Starknet/Cairo.
- Integrated real-time IoT data from Arduino devices streaming power metrics through MQTT to a backend database for accurate usage tracking.
- Developed backend APIs with FastAPI to handle device management, token balances, trade history, and secure transaction logic.
- Implemented MPESA (Daraja API) and SMS/email notifications (Africa's Talking & Nylas) to enable mobile payments and real-time user alerts.

CERTIFICATES

Mobile Software Development and Entrepreneurship Program (MIT)

Jan, 2019 - Aug, 2019
